

6. Management of innovative projects

- developing basics for a methodological management of projects in a company – preparing and implementing dedicated procedures in such fundamental areas as the management of scope, time, costs, quality, resources, communication, risk, procurement and stakeholders,
- conducting technical and economic analysis of an innovative enterprise, optimising selected areas of project management,
- performing pre-feasibility and feasibility study of an investment project, evaluating cost-effectiveness of an investment project which includes a multi-criteria assessment of projects on the basis of certain and uncertain data,
- providing support in a decision-making process as regards the implementation of innovative projects,
- workshops on the operational and strategic management of projects with the application of dedicated IT tools – MS project and P2ware Project Manager 7 Personal with PRINC 2 – the level of the workshops is customised to the needs of a company.

Supporting innovative projects management is a comprehensive service which makes the most of available knowledge, skills, tools and methods to meet goals set out at the preparation and realisation phases. The proposed areas of support will focus on an efficient and effective implementation of innovative projects through the use of computer modelling of project time or cost, cooperation between employees and a proper communication between them. On top of that, a lot of care will be put to sort out all functional, organisational and personal problems.
